

# Fuel cell- electric drive

Convenient drive solution for long ranges

Powertrain systems and electrified mobility

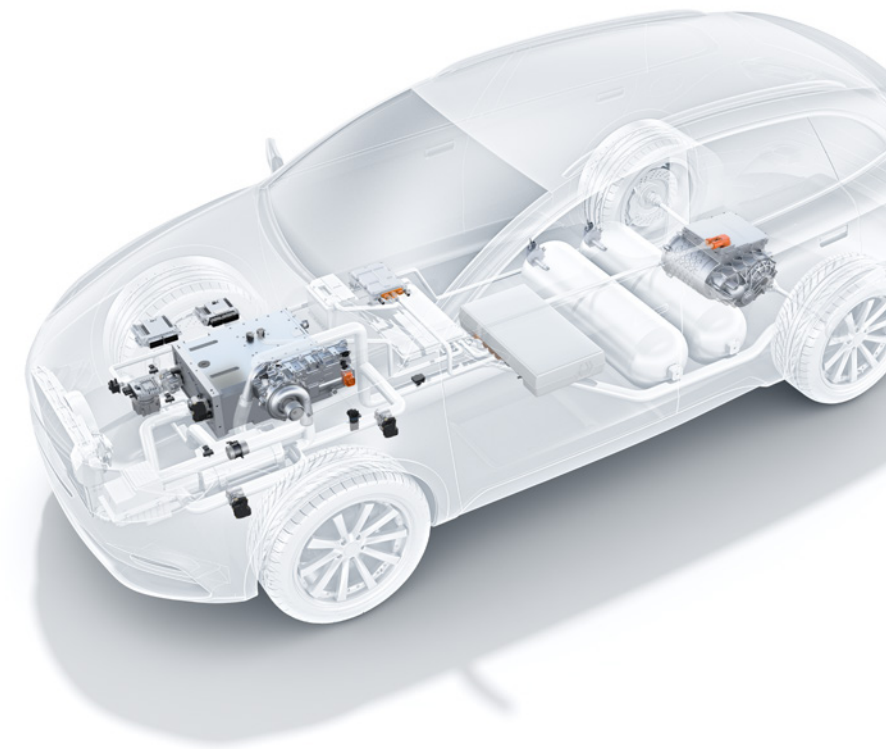

An economical and attractive technology for mobility with zero local emissions

## efficient

considerably higher efficiency than  
hydrogen combustion

## comfortable and convenient

increased range and short refilling time of  
just a few minutes, enabling journey distances  
of up to several hundred kilometers

- ▶ Fuel cell-electric drives comprise proven, easily integratable components that Bosch makes ready for production through appropriate research and development.
- ▶ The fuel cell-electric drive solution helps to ensure that compliance with current and future emission regulations is maintained.
- ▶ Thanks to Bosch's comprehensive expertise and product portfolio, the fuel-cell solution is suitable for use in both cars and commercial vehicles.
- ▶ Efficient batch bundling enables economies of scale in production.
